

Network Coverage Map Service (NCMS)

E

Calculates the new target rate using:

- Sender's estimate based on congestion cues
- the receiver's estimate
- Coverage map info directly from NCMS and from the receiver
- Any other on-path notifications

D

- Media path congestion cues
- Receiver's Estimate (e.g., REMB, TMMBR)
- Receiver's Notification (e.g., 3G Base-station)
- Receiver's NCMS throughput
